

JID INNOVATIONS

AUTHOR FORM

MS#:

Title:

Authors:

This form contains 3 sections.

Please scroll down to ensure you complete all 3:

- 1) Authorship Declaration;
- 2) Declaration of Authors' Conflicts of Interest;
- 3) Use of Artificial Intelligence / Large Language Models (AI/LLM) in preparing the manuscript.

It is the corresponding author's responsibility to collect and report accurate information for all authors.

PART 1: AUTHORSHIP DECLARATION

JID Innovations ascribes to the [authorship guidelines](#) described in The Uniform Requirements for Manuscripts Submitted to Biomedical Journals, by the International Committee of Medical Journal Editors (ICMJE). Briefly, each author should have participated sufficiently in the intellectual content of the work to take public responsibility for appropriate portions of its content. Authorship credit should be based on:

- 1) conception and design, or acquisition of data, or analysis and interpretation of data;
- 2) drafting or revising the manuscript critically for important intellectual content;
- 3) final approval of the version to be published;
- 4) agreement to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.

All conditions must be met.

I attest that all individuals designated as authors meet the authorship criteria above, and all who meet the criteria are designated as authors.

PART 2: DECLARATION OF AUTHORS' CONFLICTS OF INTEREST

In general, the JID Innovations follows the [ICMJE guidance](#) concerning the disclosure of conflicts of interest, which states the following: “In the interest of transparency, we ask you to disclose all relationships/activities/interests listed below that are related to the content of your manuscript. “Related” means any relation with for-profit or not-for-profit third parties whose interests may be, or may be perceived to be, affected by the content of the manuscript. Disclosure represents a commitment to transparency and does not necessarily indicate a bias. If you are in doubt about whether to list a relationship/activity/interest, it is preferable that you do so.

The author’s relationships/activities/interests should be defined broadly. For example, if your manuscript pertains to the epidemiology of hypertension, you should declare all relationships with manufacturers of antihypertensive medication, even if that medication is not mentioned in the manuscript.

Authors are required to report detailed information regarding all financial and material support for the work, including but not limited to grant support, funding sources, and provision of equipment and supplies. By signing this form, the corresponding author certifies that each author has declared all affiliations with or financial involvement (e.g., employment, consultancies, honoraria, stock ownership or options, expert testimony, grants or patents received or pending, royalties, etc.) with any organization or entity with a financial interest in or financial conflict with the subject matter or materials discussed in the manuscript are completely disclosed. Conflicts of interest should be disclosed in the manuscript text.

I attest that all conflicts of interest reported to me by my co-authors are accurately presented in the “Conflict of Interest Statement” in the “Author Details Page” submitted with our manuscript.

PART 3: USE OF ARTIFICIAL INTELLIGENCE / LARGE LANGUAGE MODELS IN PREPARING THE MANUSCRIPT

Where authors use generative artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should only use these technologies to improve readability and language. Applying the technology should be done with human oversight and control, and authors should carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased. AI and AI-assisted technologies should not be listed as an author or co-author, or be cited as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier's [AI policy for authors](#).

Authors should disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

Disclosure instructions

Authors must disclose the use of generative AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in the core manuscript file, before the References list. The statement should be placed in a new section entitled 'Declaration of Generative AI and AI-assisted technologies in the writing process'.

Statement: During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. The following prompts were entered: ""; ""; "". After using this tool/service, the author(s) reviewed and edited the content and take(s) full responsibility for the content of the publication.

This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, the authors should state "No AI or LLM tools were used to prepare this manuscript.

Were Artificial Intelligence or Large Language Models used to prepare this manuscript?

YES

NO

I attest that all use of AI or LLM is accurately reported in the "Use of AI / LLM Statement" in our submitted manuscript.
